

FOR IMMEDIATE RELEASE

Transform How you Divert your Kitchen Waste: CompostFit Officially Launches

📍 San Diego — Oct 6, 2026 — Today marks the official launch and general availability of CompostFit, an innovative, smart indoor composting solution designed to simplify the process of sorting personal compost and bring effortless sustainability directly to the modern kitchen.

Every year, millions of tons of household food scraps end up in landfills, generating harmful greenhouse gases. CompostFit was engineered to solve this challenge by offering a “no brainer” solution to the challenge of collecting compost in your kitchen in an effort to make composting an easy and more comfortable experience.

Equipped with two telescoping components that fit into millions of pullout cabinets in the US, CompostFit solves the challenges of too small countertop compost containers. Designed to hold more and to fit into Rev-A-Shelf RV-35 and RV-50 trash bins, CompostFit allows for a more user friendly experience, making composting as easy as recycling, fitting right into your existing trash bin, allowing for compost of soiled paper goods as well as your food scraps. CompostFit was designed specifically to address the requirements of California’s SB 1383, passed with goals of reducing methane emissions.

Key Features of CompostFit Include

- **Fits Directly into Rev-A-Shelf RV-35 and RV-50 trash bin models:** Telescoping bin fits directly into your existing pull out trash bin cabinet, allowing for seamless sorting of recycling, trash & compost.
- **Rigid Construction and Engineered Rim Teeth:** Rigid construction of the telescoping components and the locking mechanism allow for secure setup and the rim teeth will hold the trash bag adjacent so that there’s no slippage.

- **Compact, Modern Aesthetic:** Designed to integrate seamlessly into trash bin pullout cabinets with no additional footprint needed.
- **Wide Mouth Entry:** The rim and volume set for the container are wide and ensure that all items that are compostable including food scraps, soiled paper towels, napkins and unlined soiled paper plates as well as soiled cardboard can be accepted into the bin.
- **Easy Emptying:** Straight forward emptying of compost directly into your exterior trash green bin or external composter allows for you to decide when to take the compost out, not when the countertop bucket is overflowing.
- **Dishwasher-Safe Bucket:** Easy pull apart for the telescoping components allow for effortless disassembly, dishwashing and reassembly.

“Sustainable living shouldn’t disrupt your home. We make clean, simple tools designed to fit real family kitchens—helping you cut down on waste without the mess or the hassle” said **Alan Leard**, of CompostFit. "You shouldn't need an expensive motorized composter or a bin taking up your valuable kitchen countertop or floor space. CompostFit puts that power right in your pull out trash bin."

Availability and Pricing

CompostFit is available for purchase starting today at \$39.99 through the website, CompostFit.com.

- **MSRP:** \$39.99
